## Contents

<b>1</b>	<b>Introduction</b>	<b>2</b>
<b>2</b>	<b>What are acoustic waves?</b>	<b>3</b>
<b>3</b>	<b>Governing equations for the motion of a fluid</b>	<b>3</b>
<b>4</b>	<b>The Helmholtz decomposition</b>	<b>4</b>
<b>5</b>	<b>Entropy, Vorticity and Acoustic “Waves”</b>	<b>5</b>
5.1	Small disturbances to a uniform flow . . . . .	5
5.2	High frequency wave propagation . . . . .	7
5.3	Linear coupling of modes . . . . .	7
5.4	Nonlinear coupling of modes . . . . .	8
5.5	Small disturbances to an irrotational flow . . . . .	8
5.6	Small disturbances to a parallel shear flow, and their instabilities . . . . .	9
<b>6</b>	<b>The matched asymptotic expansion (MAE)</b>	<b>11</b>
<b>7</b>	<b>Lighthill’s acoustic analogy</b>	<b>12</b>
7.1	Prologue: acoustic waves produced by compact external sources of mass and momentum. . . . .	12
7.2	Formulation . . . . .	14
7.3	Preliminary Estimation of the Far Field . . . . .	15
7.4	The method of MAE applied to sound generation at low Mach number . . . . .	17
7.5	Generalizations and application to jet noise . . . . .	20
7.6	Summary . . . . .	21
<b>8</b>	<b>Sound generation near solid boundaries</b>	<b>22</b>
<b>9</b>	<b>Vorticity and entropy revisited: Vortex Sound</b>	<b>25</b>
<b>10</b>	<b>Including refraction effects: Lilley’s acoustic analogy</b>	<b>27</b>
<b>11</b>	<b>Linear stability of shear flows revisited: Mach wave radiation and superdirective acoustic fields</b>	<b>27</b>
