

Contents

1	Generalities	4
1.1	Introduction	4
1.2	Compressible Euler Equations	7
1.3	The residual distribution schemes	8
1.4	A Lax-Wendroff Result for Residual Distribution Schemes	9
1.5	Proof of Theorem 1.4.1	11
2	Some examples for scalar problems	17
2.1	Design principles	17
2.1.1	The residual property and the Linear Preserving condition	17
2.1.2	Monotonicity preserving schemes	18
2.1.3	Linear preserving schemes versus monotone schemes : the Godunov theorem	19
2.2	Examples and construction of second order accurate schemes	19
2.2.1	The blending approach	20
2.2.2	The modified approach	23
2.2.3	The projection approach	26
2.3	Numerical illustrations	28
3	Steady problems for systems	32
3.1	Design principles	33
3.1.1	The up-winding property	33
3.1.2	Second order accuracy at steady state : the LP condition	33
3.1.3	The monotonicity condition	34
3.2	Some examples and their properties	34
3.2.1	The system N scheme	34
3.2.2	The system LDA scheme	35
3.2.3	Additional properties of the LDA and N schemes	35
3.2.4	The Rusanov scheme	36
3.2.5	Proofs of the properties of the system N and LDA schemes	36
3.2.6	Connection between linear and non linear problems : The Roe Struijs Deconinck linearisation	41
3.2.7	Energy and Entropy Analysis of the System N-Scheme: the Nonlinear Case	43
3.3	The blended approach for (1.3)	46
3.3.1	Comments on the system N scheme	46
3.3.2	Construction of an entropy stable LP scheme	46
3.3.3	The blended scheme is LP at convergence	48
3.3.4	Boundary conditions	49
3.3.5	Numerical examples	49
3.4	The modified and projection approach	63
3.4.1	Stability analysis by simple waves	63
3.4.2	Construction of LP schemes for systems	69
3.4.3	Example of the Cauchy–Riemann equations	72
3.4.4	Case of the Euler equations	74
3.4.5	Conclusions	81

4	High order schemes	84
4.1	Introduction	84
4.2	Notations and basic concepts	85
4.2.1	Notation and degrees of freedom	85
4.2.2	Consistency, accuracy	86
4.3	Examples of schemes	89
4.3.1	Monotone Schemes	89
4.3.2	Case of a linear flux	91
4.3.3	Case of a non linear flux	92
4.4	Variational formulation of the PSI and LDA schemes	92
4.5	Construction of high order upwind monotonicity preserving residual distributive scheme .	94
4.6	Some numerical results	95
4.6.1	Linear advection	96
4.6.2	Burger equation	100
4.7	Extension to the Cauchy Riemann system	101
4.8	Conclusions	106
4.9	Proofs	106
4.9.1	Proof of Theorem 4.2.2	106
4.9.2	Stability proof	110
