<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Petrov-Galerkin formulation of Residual Distribution approach</b>	<b>4</b>
<b>3</b>	<b>Residual Distribution Schemes for unsteady scalar advection equations</b>	<b>7</b>
3.1	Principles . . . . .	7
3.2	Extension of classical schemes . . . . .	8
3.2.1	The LDA scheme . . . . .	9
3.2.2	The N scheme . . . . .	10
3.2.3	The PSI scheme . . . . .	12
3.2.4	The N-Modified scheme . . . . .	13
3.3	Numerical Results . . . . .	14
3.3.1	The rotating cosine hill . . . . .	14
3.3.2	The rotating cylinder . . . . .	14
3.4	Conclusions for the scalar problems . . . . .	15
<b>4</b>	<b>Residual Distribution Schemes for the unsteady Euler equations</b>	<b>22</b>
4.1	The cell residual . . . . .	22
4.2	System residual distribution schemes . . . . .	24
4.2.1	The system LDA scheme . . . . .	24
4.2.2	The system N-scheme . . . . .	24
4.2.3	The system N-modified scheme . . . . .	25
4.3	Numerical Results . . . . .	26
4.3.1	Two-dimensional Sod’s Riemann Problem . . . . .	26
4.3.2	A Mach 3 Wind Tunnel with a Forward Facing Step . . . . .	27
4.3.3	Reflection of a Shock on a Wedge . . . . .	29
4.3.4	Shock-Vortex Interaction Problem . . . . .	30
<b>5</b>	<b>Toward unconditionally monotone and LP schemes</b>	<b>32</b>
5.1	A two-layers unconditionally monotone LP scheme . . . . .	32
5.1.1	Description of an unconditionally monotone scheme . . . . .	32
5.1.2	An unconditionally monotone and LP scheme . . . . .	34
5.1.3	Numerical example : Mach 3 Wind Tunnel with a Forward Facing Step . . . . .	35
5.2	A single layer unconditionally monotone LP scheme . . . . .	37
5.2.1	The unconditionally monotone “inconsistent” scheme . . . . .	37
5.2.2	A single layer unconditionally monotone and LP scheme . . . . .	38
5.2.3	Scalar Tests . . . . .	39
5.2.4	Results for the Euler equations . . . . .	44
<b>6</b>	<b>Comments on the efficiency</b>	<b>49</b>
<b>7</b>	<b>Concluding remarks</b>	<b>49</b>
<b>A</b>	<b>Energy-Stability of the Narrow scheme</b>	<b>50</b>
