

# Contents

1. Cycles.....	4
1.1. Ideal Joule Process .....	4
1.2. Real Joule Process.....	6
1.2.1. Nearly Real Joule Process .....	7
1.2.2. Turbine Cooling .....	8
1.2.3. Real Joule process .....	10
1.3. From power generation to thrust generation .....	11
1.3.1. Turbojet.....	12
1.3.2. Turbofan.....	13
1.4. Quality criteria.....	14
1.4.1. Propulsive Efficiency .....	14
1.4.2. Thermal Efficiency.....	15
1.4.3. Overall Efficiency .....	16
2. Mission Analysis .....	17
2.1. General Requirements .....	17
2.2. Single Point Design.....	18
2.3. Multi Point Design .....	20
2.3.1. Commercial Aircraft .....	20
2.3.2. Fighter Aircraft.....	21
2.4. Design Tables and Computer Decks .....	23
3. Off-Design Operation of the Turbomachines .....	25
3.1. Off-Design Operation of a Turbojet.....	25
3.1.1. Off-Design Operation of the Components .....	25
3.1.2. Collaboration of the Components .....	28
3.1.3. Some Conclusions .....	33
3.2. Off-Design Operation of a Gas Generator .....	35
3.3. Booster .....	37
3.4. Fan.....	37
3.5. Low Pressure Turbine (LPT).....	38
4. Component Design Constraints .....	39
4.1. Compressors .....	39
4.1.1. Axial versus radial compressors.....	40
4.1.2. Aerodynamics.....	41
4.1.3. Surge margin .....	44
4.1.4. Core Size .....	45
4.2. Combustor .....	46
4.2.1. Efficiency .....	47
4.2.2. Emissions .....	48
4.2.3. Fuel flow limits .....	48
4.3. Turbines.....	48
4.3.1. Aerodynamics.....	49

4.3.2.	Efficiency definitions .....	52
4.3.3.	Cooling air .....	55
4.3.4.	Mechanics .....	57
4.4.	Preliminary Control Schedules .....	58
<b>5.</b>	<b>Application Examples .....</b>	<b>60</b>
5.1.	Mixed versus separate flow turbofans .....	60
5.1.1.	Separate flow turbofan .....	60
5.1.2.	Mixed flow turbofan .....	61
5.1.3.	Discussion .....	61
5.2.	Single stage versus two stage HP turbine .....	62
5.2.1.	Simple cycle parametric study .....	63
5.2.2.	Realistic optimization .....	65
5.2.3.	Summary and concluding remarks .....	70
5.3.	Dry versus reheated engine .....	70
5.3.1.	Afterburner design considerations .....	71
5.3.2.	Afterburner fuel control .....	73
5.3.3.	Dry and reheated turbofans for supersonic flight .....	73
5.4.	Selection of nozzle type .....	75
5.4.1.	Definition of thrust coefficients .....	76
5.4.2.	Convergent nozzle .....	77
5.4.3.	Convergent-divergent nozzle .....	78
5.4.4.	Thrust potential of a convergent-divergent nozzle .....	80
<b>6.</b>	<b>Derivative Engines .....</b>	<b>80</b>
6.1.	Core design for a family of engines .....	81
6.2.	Design of a derivative engine .....	81
6.2.1.	Growth engine design requirements .....	82
6.2.2.	Mathematical model of the engine .....	84
6.2.3.	Optimization methodologies .....	84
6.2.4.	Optimizing the growth engine .....	88
6.2.5.	Discussion of the results .....	90
6.2.6.	Conclusions .....	93
<b>7.</b>	<b>Pre Design Tools .....</b>	<b>93</b>
7.1.	NPSS .....	94
7.2.	The MTU pre design tool MOPEDS .....	95
7.2.1.	Structure of the program .....	96
7.2.2.	Using MOPEDS .....	97
7.2.3.	Application example .....	99
<b>8.</b>	<b>Nomenclature .....</b>	<b>101</b>
<b>9.</b>	<b>References .....</b>	<b>102</b>
