

Table of Contents

PART I – FLIGHT MEASURED TRANSITION PHENOMENA	
1.1. Introduction	4
1.2. Flight Experiment and Instrumentation	5
1.3. Transition Results and Discussion	7
1.3.1. Slat	7
1.3.2. Main Element	14
1.3.3. Fore Flap	17
1.4. Final Observations	19
PART II – TRANSITION PREDICTION FOR A TWO DIMENSIONAL NAVIER-STOKES SOLVER	
2.1. Introduction	20
2.2. Reynolds-Averaged Navier-Stokes Method	21
2.3. Turbulence Models	22
2.3.1. Baldwin-Barth One-Equation Model	22
2.3.2. Spalart-Allmaras One-Equation Model	23
2.4. Transition Prediction Model	24
2.4.1. Tollmien-Schlichting Instability	24
2.4.2. Laminar Separation	26
2.4.3. Turbulence Contamination	26
2.5. Grid Generation	27
2.6. Results and Discussion	28
2.6.1. NLF(1)-0416 Airfoil	29
2.6.2. S809 Airfoil	30
2.6.3. NLR 7301 Two-Element Airfoil	31
2.6.4. Three-Element Airfoil	32
2.7. Extension of Method	33
2.8. Concluding Remarks	35
PART III – SIMULATION OF LAMINAR SEPARATION BUBBLES	
3.1. Introduction	37
3.2. Numerical Method	39
3.3. Airfoil and Computational Grids	40
3.4. Results	41
3.4.1. Laminar Flow	41
3.4.2. Laminar/Turbulent Flow	43
3.5. Discussion	44
3.6. Concluding Remarks	46
