1	Introduction	1
1.1	The role of CFD	1
1.2	Is CFD a mature technology?	1
1.3	Verification and validation in CFD	2
1.3.1	Errors and error sources	3
1.3.2	Verification procedure	5
1.3.3	Validation error and uncertainty	7
2	Multi-dimensional Upwind Residual Distribution Method	8
2.1	Introduction	8
2.2	Residual distribution schemes for a scalar conservation law	9
2.2.1	Scalar advection	9
2.2.2	Design principles	11
2.2.3	Scalar advection schemes	11
2.3	Residual distribution schemes for hyperbolic systems of conservation laws	12
2.3.1	System schemes	12
2.3.2	Multi-dimensional high resolution schemes	14
2.3.3	Conservative linearization	15
2.3.4	Invariance for similarity transformations	16
2.3.5	Preconditioning and hyperbolic-elliptic splitting	17
2.3.6	Discretization of the viscous terms	17
2.4	Turbulence modelling	18
2.5	Parallel implicit solver	18
3	Verification and Validation results for the THOR Unstructured Grid Euler and Navier-Stokes Solver	21
3.1	Introduction	21
3.1.1	Background of present work	21
3.1.2	Description of the CFD codes	21

3.1.3	Drag computation issues	23
3.2	Inviscid flow over a bump	25
3.2.1	Computational domain and boundary conditions	25
3.2.2	Subsonic flow at Mach 0.4	25
3.2.3	Transonic flow at Mach 0.55	33
3.3	Inviscid flow over NACA 0012 airfoil	38
3.3.1	Airfoil geometry and trailing edge modification	38
3.3.2	Grids and boundary conditions	39
3.3.3	Subsonic flow over NACA 0012 airfoil : $\mathbf{M}_\infty = \mathbf{0.5}$, $\alpha = \mathbf{3}^\circ$	40
3.3.4	Transonic flow over NACA 0012 airfoil : $\mathbf{M}_\infty = \mathbf{0.85}$, $\alpha = \mathbf{1}^\circ$	54
3.4	Inviscid flow over ONERA M6 wing	61
3.4.1	Grids and boundary conditions	61
3.4.2	Inviscid flow over M6 wing : $\mathbf{M}_\infty = \mathbf{0.3}$, $\alpha = \mathbf{0}^\circ$	62
3.4.3	Inviscid flow over M6 wing : $\mathbf{M}_\infty = \mathbf{0.84}$, $\alpha = \mathbf{3.06}^\circ$	66
3.5	Turbulent transonic flow over RAE 2822 airfoil	69
3.6	Turbulent transonic flow over ONERA M6 wing	75
3.6.1	Grids and boundary conditions	75
3.6.2	Results	76
	Conclusions	80
	Acknowledgements	81
	Bibliography	82
