

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Objectives and plan	2
2	Turbulence: a brief review	3
2.1	What is turbulence?	3
2.2	Transition to turbulence	3
2.3	Scales of turbulence	4
2.4	Free shear flows	5
2.4.1	Wakes	5
2.4.2	Jets	6
2.4.3	Mixing layers	6
2.5	Wall-bounded flows	6
2.6	Simulation techniques	7
3	Problem formulation	11
3.1	The Navier-Stokes equations	11
3.2	The Reynolds-averaged Navier-Stokes equations	11
3.2.1	Reynolds averaging	11
3.2.2	Mean-flow equations—incompressible case	12
3.2.3	Reynolds-stress equations—incompressible case	13
3.2.4	Mean-flow equations—compressible case	13
3.3	The filtered Navier-Stokes equations	13
3.3.1	The filtering operation	13
3.3.2	The filtered equations of motion — incompressible case	15
3.3.3	The filtered equations of motion — compressible case	15
4	Numerical methods	17
4.1	Resolution requirements	17
4.1.1	Direct simulations	17
4.1.2	Large-eddy simulation	18
4.2	Time advancement	19
4.3	Spatial discretization	20
4.4	Conservation	20
4.5	Example of a numerical algorithm	21
4.6	Boundary and initial conditions	22
4.6.1	Periodic conditions	22
4.6.2	Outflow conditions	22
4.6.3	Inflow conditions	22
4.6.4	Wall boundary conditions	24
4.6.5	Initial conditions	25
