

# Aeroelastic instability problems for wind turbines

Morten Hartvig Hansen  
Wind Energy Department,  
Risø National Laboratory,  
Technical University of Denmark,  
Frederiksborgvej 399, DK-4000 Roskilde

March 12, 2007

## Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Wind turbine terminology and modal dynamics . . . . .	4
1.1.1	Degrees of freedom . . . . .	4
1.1.2	Modal dynamics . . . . .	5
<b>2</b>	<b>Stall-induced vibrations</b>	<b>9</b>
2.1	Instability mechanism for a typical section . . . . .	10
2.1.1	Dynamic stall effects . . . . .	13
2.2	Two case studies . . . . .	14
2.2.1	Stall-induced tower vibrations . . . . .	14
2.2.2	Stall-induced edgewise blade vibrations . . . . .	17
2.3	State-of-the-art issues . . . . .	18
<b>3</b>	<b>Classical flutter</b>	<b>21</b>
3.1	Instability mechanism for a typical section . . . . .	22
3.2	Case study – Blade flutter on a 5 MW turbine . . . . .	26
3.3	State-of-the-art issues . . . . .	29
