Contents

1	Introduction	2
2	Flow Classification and scale separation	3
2.1	Typical forms of multiphase flow systems	3
2.2	Scale separation	3
3	Instantaneous multi-fluid descriptions	4
3.1	The instantaneous two-fluid equations	4
3.2	The instantaneous one-fluid equations	5
4	The LES formalism for multi-fluid flows	6
4.1	The filtered multi-fluid equations	7
4.2	The filtered one-fluid equations	8
4.3	Turbulence Subgrid-Scale (SGS) modelling	9
4.4	Beyond filtering: The projected equations in VMS	11
4.5	Subgrid Surface-scale modelling	12
5	LES of stratified air-water flow	13
5.1	Problem set-up and simulation strategy	13
5.2	A-posteriori results of the Smagorinsky SGS models	15
5.3	A-posteriori results of the VMS approach	18
6	LES of Steep Water Waves	19
6.1	Problem set-up and simulation strategy	19
6.2	Wave breaking events and flow structure	21
6.3	Mean flow results	21
6.4	TKE longshore evolution	25
7	Concluding Remarks	25
