

Contents

| | | |
|----------|--|-----------|
| 1 | Introduction | 6 |
| 2 | Balance equations | 8 |
| 2.1 | Instantaneous balance equations | 8 |
| 2.2 | Reynolds and Favre averaging | 10 |
| 2.3 | Favre averaged balance equations | 11 |
| 2.4 | Filtering and Large Eddy Simulation | 12 |
| 3 | Major properties of premixed, nonpremixed and partially premixed flames | 15 |
| 3.1 | Laminar premixed flames | 15 |
| 3.1.1 | General characteristics | 15 |
| 3.1.2 | Self-similar behaviour | 16 |
| 3.2 | Laminar diffusion flames | 18 |
| 3.3 | Partially premixed flames | 25 |
| 4 | A direct analysis: Taylor’s expansion | 27 |
| 5 | Scales and diagrams for turbulent combustion | 28 |
| 5.1 | Introduction | 28 |
| 5.2 | Turbulent premixed combustion diagram | 29 |
| 5.2.1 | Introduction | 29 |
| 5.2.2 | Combustion regimes | 29 |
| 5.2.3 | Comments | 32 |
| 5.3 | Nonpremixed turbulent combustion diagram | 33 |
| 5.3.1 | Introduction | 33 |
| 6 | Tools for turbulent combustion modeling | 36 |
| 6.1 | Introduction | 36 |
| 6.2 | Scalar dissipation rate | 37 |
| 6.3 | Geometrical description | 39 |
| 6.3.1 | G-field equation | 39 |
| 6.3.2 | Flame surface density description | 41 |
| 6.3.3 | Flame wrinkling description | 44 |
| 6.4 | Statistical approaches: Probability density function | 45 |
| 6.4.1 | Introduction | 45 |
| 6.4.2 | Presumed probability density functions | 46 |
| 6.4.3 | Pdf balance equation | 47 |
| 6.4.4 | Joint velocity/concentrations pdf | 50 |
| 6.4.5 | Conditional Moment Closure (CMC) | 50 |
| 6.5 | Similarities and links between the tools | 51 |
| 7 | Chemistry for turbulent combustion | 54 |
| 7.1 | Global schemes | 54 |
| 7.2 | Automatic reduction - Tabulated chemistries | 55 |
| 7.2.1 | Intrinsic Low Dimensional Manifold (ILDm) | 55 |
| 7.2.2 | Flame prolongation of ILDM - Flamelet generated manifold | 56 |
| 7.3 | In situ adaptive tabulation (ISAT) | 57 |

| | | |
|-----------|--|------------|
| 8 | Reynolds-averaged models for turbulent premixed combustion | 58 |
| 8.1 | Turbulent flame speed | 58 |
| 8.2 | Eddy-Break-Up model | 58 |
| 8.3 | Bray-Moss-Libby (BML) model | 59 |
| 8.3.1 | Introduction | 59 |
| 8.3.2 | BML model analysis | 61 |
| 8.3.3 | Recovering mean reaction rate from tools relations | 63 |
| 8.3.4 | Reynolds and Favre averaging | 65 |
| 8.3.5 | Conditional averaging - Counter-gradient turbulent transport | 66 |
| 8.4 | Models based on the flame surface area estimation | 67 |
| 8.4.1 | Introduction | 67 |
| 8.4.2 | Algebraic expressions for the flame surface density Σ | 69 |
| 8.4.3 | Flame surface density balance equation closures | 73 |
| 8.4.4 | Analysis of the flame surface density balance equation | 75 |
| 8.4.5 | Flame stabilization modeling | 80 |
| 8.4.6 | A related approach: G -equation | 81 |
| 8.5 | Scalar dissipation rate and presumed PDF modeling | 81 |
| 8.5.1 | Modeling progress variable dissipation rate with propagating flamelets | 81 |
| 8.5.2 | Modeling premixed turbulent combustion using presumed PDF and detailed chemistry | 86 |
| 9 | Turbulent transport in premixed combustion | 91 |
| 9.1 | Introduction | 91 |
| 9.2 | Direct numerical simulation analysis of turbulent transport | 92 |
| 9.2.1 | Introduction | 92 |
| 9.2.2 | Results | 92 |
| 9.3 | Physical analysis | 95 |
| 9.4 | External pressure gradient effects | 98 |
| 9.5 | Counter gradient transport - Experimental results | 101 |
| 9.6 | To include counter-gradient turbulent transport in modeling | 101 |
| 9.7 | Towards a conditional turbulence modeling ? | 103 |
| 10 | Reynolds averaged models for nonpremixed turbulent combustion | 104 |
| 10.1 | Introduction | 104 |
| 10.2 | Fuel/Air mixing modeling | 106 |
| 10.2.1 | Introduction | 106 |
| 10.2.2 | Balance equation and simple relaxation model for $\tilde{\chi}$ | 106 |
| 10.3 | Models assuming infinitely fast chemistry | 107 |
| 10.3.1 | Eddy Dissipation Model | 107 |
| 10.3.2 | Presumed pdf: infinitely fast chemistry model (IFCM) | 108 |
| 10.4 | Flamelet modeling | 108 |
| 10.4.1 | Introduction | 108 |
| 10.4.2 | Flame structure in composition space, $Y_i^{SLFM}(Z^*, \chi^*)$ | 110 |
| 10.4.3 | Mixing modeling in SLFM | 113 |
| 10.4.4 | Conclusion | 114 |
| 10.5 | Flame surface density modeling, Coherent Flame Model (CFM) | 115 |
| 10.6 | MIL model | 116 |
| 10.7 | Conditional Moment Closure (CMC) | 118 |
| 10.8 | Pdf modeling | 119 |
| 10.8.1 | Turbulent micromixing | 121 |

| | | |
|-----------|--|------------|
| 10.8.2 | Linear relaxation model, IEM/LMSE | 121 |
| 10.8.3 | GIEM model | 122 |
| 10.8.4 | Stochastic micromixing closures | 123 |
| 10.8.5 | Interlinks PDF / Flame surface modeling | 126 |
| 10.8.6 | Joint velocity/concentrations pdf modeling | 126 |
| 10.9 | RANS PCM of turbulent non-premixed jet-flames | 127 |
| 10.9.1 | Background | 128 |
| 10.9.2 | PCM | 129 |
| 10.9.3 | First order approximation | 133 |
| 10.9.4 | Second order approximation | 133 |
| 10.9.5 | SANDIA D-Flame with FTC-PCM | 135 |
| 11 | Large eddy simulation | 142 |
| 11.1 | Introduction | 142 |
| 11.2 | Unresolved turbulent fluxes modeling | 142 |
| 11.2.1 | Smagorinsky model | 142 |
| 11.2.2 | Scale similarity model | 143 |
| 11.2.3 | Germano dynamic model | 143 |
| 11.2.4 | Structure function models | 144 |
| 11.2.5 | Gradient model | 144 |
| 11.2.6 | Unresolved scalar transport | 145 |
| 11.3 | Simplest approaches for combustion modeling | 145 |
| 11.3.1 | Arrhenius law based on filtered quantities | 145 |
| 11.3.2 | Extension of algebraic Favre averaged approaches | 145 |
| 11.3.3 | Simple extension of the Germano dynamic model | 146 |
| 11.4 | LES models for non premixed combustion | 146 |
| 11.4.1 | Linear Eddy Model | 146 |
| 11.4.2 | Dynamic micro-mixing model | 147 |
| 11.4.3 | Probability Density functions | 148 |
| 11.4.4 | PCM-FPI for partially premixed combustion diluted by burnt gases. | 149 |
| 11.5 | LES models for premixed combustion | 153 |
| 11.5.1 | Introduction | 153 |
| 11.5.2 | Artificially thickened flames | 153 |
| 11.5.3 | G -equation | 154 |
| 11.5.4 | Filtering the progress variable balance equation | 155 |
| 11.5.5 | SGS variance of progress variable | 158 |
| 11.5.6 | FSD-PDF SGS modeling: LES of premixed turbulent flames with tabulated detailed chemistry | 160 |
| 11.6 | A comment about dynamic modelling for turbulent combustion | 164 |
| 11.7 | Numerical costs | 165 |
| 11.8 | Comparison with experimental data | 166 |
| 11.9 | Examples | 168 |
| 11.9.1 | Scalar transport | 168 |
| 11.9.2 | Premixed flame laboratory experiment | 170 |
| 11.9.3 | Lifted methane-air jet flame in a vitiated coflow | 172 |
| 11.9.4 | Gas turbine combustor | 174 |
| 11.9.5 | Internal combustion engines | 177 |
| 11.9.6 | LES of combustion including radiative heat transfer | 178 |
| 12 | Conclusion | 184 |
