System Modelling and Stability Analysis

Wolfgang Polifke *
Lehrstuhl für Thermodynamik
TU München, Germany

December 3rd - 7th, 2007

Contents

1 Introduction **3**

2 The Physics of Thermo-Acoustic Instabilities **4**

3 Stability Analysis **8**
3.1 Unsteady simulation 9
3.2 Determination of eigenmodes and eigenfrequencies 11
3.2.1 Eigenfrequencies of a Rijke tube 12
3.2.2 Further remarks on dynamic stability analysis 15
3.3 The Nyquist Criterion 17
3.3.1 Nyquist plots in control theory 17
3.3.2 Application of the Nyquist criterion to thermo-acoustic systems . . 18
3.3.3 Identification of eigenfrequencies and growth rates from a Nyquist plot 21
3.4 Acoustic energy budget 22
3.5 Further reading 24

4 System Modelling **24**
4.1 Finite-Volume / Finite-Element models 25
4.1.1 Computational fluid dynamics 25
4.1.2 Computational acoustics 26
4.2 Galerkin method 30

5 Network Models **32**
5.1 Review of previous work 33
5.2 Compact element 34
5.3 Ducts 37
5.3.1 Thin annular duct 37

*polifke@td.mw.tum.de

5.3.2 Ducts with varying cross-sectional area 38
5.3.3 Joints and forks 38
5.4 Compact flame 39
5.5 Example network calculations 40

6 Acknowledgments **42**

A Characteristic equation **50**

B Finding roots **50**
