

Table of contents

1. Well posed initial-boundary value problems for the Euler and Navier-Stokes equations
 - 1.1 Introduction
 - 1.2 Wellposedness of the Euler equations
 - 1.3 Wellposedness of the Navier-Stokes equations
 - 1.4 Boundary conditions when accurate data are missing

2. Stability theory for difference approximations of initial-boundary value problems
 - 2.1 Introduction
 - 2.2 The energy method
 - 2.3 The normal mode analysis

3. Solution of the Euler and Navier-Stokes equations on composite grids
 - 3.1 Introduction
 - 3.2 The Euler equations on patched subgrids
 - 3.3 Overlapping subgrids
 - 3.4 Subdomains with different differential equations
