

A GENERAL ANALYSIS OF TWO-DIMENSIONAL CONVECTION SCHEMES

by

CH. HIRSCH

DEPT. FLUID MECHANICS

VRIJE UNIVERSITEIT BRUSSEL

TABLE OF CONTENT

Introduction.....	1
1. Linear convection equation	1
1.1. General nine point molecules.....	2
2. Conditions for second order accuracy.....	5
2.1. Stationary convection equations.....	6
2.2. Unsteady convection equations	6
3. Upwind schemes for 6-point molecules	8
3.1. General compact schemes with second order accuracy	9
3.2. Second order compact schemes in space and time	10
3.3. Upwind schemes with zero cross-diffusion.....	11
3.3. Monotonicity conditions for 6-point schemes.....	12
4. Upwind schemes for 4-point molecules	13
5. High resolution and monotone schemes	16
5.1. One-dimensional TVD properties and limiters	17
5.2. Two-dimensional monotone schemes with no cross-diffusion.....	22
