

TABLE OF CONTENTS

| | |
|--|----|
| 1. Introduction | 1 |
| 2. Linear advection schemes in one dimension | 3 |
| 3. Linear advection schemes in two dimensions | 6 |
| 3.1 Preliminaries | 6 |
| 3.2 Design criteria for advection schemes on linear triangles | 8 |
| 3.3 Linear schemes satisfying property P (positivity) | 11 |
| 3.3.1 The N-scheme. The optimal positive linear scheme | 12 |
| 3.3.2 The first order upwind finite volume scheme | 13 |
| 3.4 Linear schemes satisfying property LP (linearity preservation) | 15 |
| 3.4.1 The low-diffusion schemes A and B | 15 |
| 3.4.2 The Lax-Wendroff scheme | 16 |
| 3.4.3 Galerkin finite element or central finite volume method | 17 |
| 3.4.4 Streamline upwind or least squares Galerkin FEM (SUPG) | 18 |
| 4. Nonlinear advection schemes in two dimensions | 19 |
| 4.1 The nonlinear gradient dependent advection speed | 19 |
| 4.2 Schemes satisfying P and LP | 21 |
| 4.2.1 The NN scheme (VKI) | 21 |
| 4.2.2 The NN scheme : Roe's Level scheme | 22 |
| 4.2.3 The positive streamwise invariant (PSI) scheme | 24 |
| 4.3 Schemes satisfying LP | 25 |
| 4.3.1 The SUPG scheme with shock capturing term | 25 |
| 5. Nonlinear advection equation. Linearization with property U | 27 |
| 5.1 Linearization for the one dimensional case | 27 |
| 5.2 The two dimensional linearization | 27 |
| 6. Numerical examples | 29 |
| 6.1 Test cases | 29 |
| 6.2 Comparison of the schemes | 29 |
| 7. Systems of equations : the Euler equations | 31 |
| 7.1 Résumé of decomposition methods | 31 |
| 7.1.1 Deconinck-Hirsch four wave decomposition | 31 |
| 7.1.2 Roe's five and six wave models | 32 |
| 7.2 Linearization with property U | 32 |
| 7.3 Linearization applied to the Deconinck-Hirsch wave decomposition | 36 |
| 7.4 Linearization applied to Roe's models | 37 |
| 7.5 Boundary conditions | 37 |
| 8. Numerical examples | 38 |
| 8.1 Test cases | 38 |
| 8.2 Results with Deconinck-Hirsch decomposition | 38 |
| 8.3 Results with Roe's decompositions | 39 |
| 9. Conclusions | 40 |
| References | 41 |
| Figures | 43 |
