## Abstract

These lecture notes serve as an introduction to the basic data structure which may help the developers of a mesh generation/adaption code.

## Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Basic Data Structures</b>	<b>4</b>
2.1	Linear Lists . . . . .	4
2.1.1	Stacks and Queues . . . . .	5
2.1.2	Sequential Allocation . . . . .	5
2.1.3	Linked Allocation . . . . .	7
2.2	Hash Tables . . . . .	10
2.3	Static Tables . . . . .	13
<b>3</b>	<b>Tree Structures for One-dimensional Searches</b>	<b>14</b>
3.1	Ordering Relation . . . . .	14
3.2	General Description of Trees . . . . .	15
3.3	Binary Trees . . . . .	16
3.3.1	Binary Trees Implementations . . . . .	17
3.4	Heaps . . . . .	18
3.5	Binary Search Trees . . . . .	20
3.6	Digital Trees . . . . .	22
<b>4</b>	<b>Multidimensional Search</b>	<b>23</b>
4.1	Quadtrees . . . . .	24
4.1.1	Region Based Quadtrees . . . . .	25
4.1.2	Point Based Quadtrees . . . . .	26
4.2	Binary Trees for Multidimensional Search . . . . .	27
4.2.1	Bit interleaving . . . . .	28

<b>5</b>	<b>Intersection Problems</b>	<b>29</b>
5.1	Representing an Interval as a Point . . . . .	30
<b>6</b>	<b>Final remarks</b>	<b>30</b>
