<b>1</b>	<b>Introduction to aero-acoustics of internal flows</b>	<b>1</b>
1.1	Introduction . . . . .	4
1.2	Fluid dynamics . . . . .	6
1.2.1	Conservation laws . . . . .	6
1.2.2	Constitutive equations . . . . .	10
1.2.3	Entropy equation . . . . .	13
1.2.4	Boundary conditions . . . . .	15
1.2.5	Vorticity and potential flows . . . . .	15
1.3	Lighthill's analogy . . . . .	17
1.4	Acoustics of a quiescent fluid . . . . .	20
1.4.1	Wave equation . . . . .	20
1.4.2	Elementary solutions . . . . .	21
1.4.3	Acoustical energy and acoustical impedance . . . . .	23
1.4.4	Range of validity of acoustical approximation . . . . .	25
1.4.5	Acoustical field of a harmonically pulsating or translating sphere . . . . .	28
1.4.6	Green's function and integral formulation . . . . .	35
1.4.7	Multipole expansion . . . . .	39
1.4.8	Doppler effect . . . . .	41
1.4.9	Influence of walls . . . . .	44
1.4.10	Influence of a compact body on radiation . . . . .	46
1.5	Waves in pipes . . . . .	49
1.5.1	Pipe modes . . . . .	49
1.5.2	One dimensional Green's function for infinite pipe . . . . .	54
1.5.3	Reflections at pipe discontinuities at low frequencies. . . . .	56
1.5.4	The open pipe termination in quiescent fluid . . . . .	61
1.5.5	Simple resonators in pipe systems . . . . .	63
1.5.6	Helmholtz resonator . . . . .	70
1.5.7	Self-sustained oscillations . . . . .	73
1.5.8	The clarinet . . . . .	81
1.6	Vortex-sound theory . . . . .	85
1.6.1	Paradox of D'Alembert and flow separation . . . . .	85
1.6.2	Vortex-sound analogy . . . . .	91
1.6.3	Vortex dynamics . . . . .	93
1.6.4	Dipole character of vortex sound . . . . .	96

1.6.5	Grazing flow along a Helmholtz resonator . . . . .	100
1.6.6	Low frequency behaviour of an open pipe termination .	106
1.6.7	High amplitude response of resonators . . . . .	111
1.7	Turbulent noise . . . . .	114
1.7.1	Turbulence . . . . .	114
1.7.2	Isothermal free jets . . . . .	116
1.7.3	Low frequency behaviour of a jet in an infinite pipe . .	120
1.7.4	Low frequency turbulent sound production by a di- aphragm. . . . .	122
