Contents

1	Abstract	2
2	Nomenclature	2
3	Introduction	3
4	Data Evaluation	5
5	Numerical Approach	6
5.1	Panel Method VSAERO	6
5.2	CFD Solver DLR TAU-Code	7
5.2.1	Solver module	8
5.2.2	Adaptation module	8
5.2.3	Motion module	8
6	Experimental Results	9
7	Numerical Results	10
7.1	Description of the Geometries	10
7.2	Influence of the model sting	10
7.3	Sensitivity studies: Determination of phase and amplitude	11
7.4	Calculations under steady state conditions	11
7.5	Calculations under quasi-steady conditions	11
7.6	Comparision of quasi-steady and unsteady results	12
