

Table of Contents

1	Multidisciplinary optimization methods	1
1.1	Definition of optimization problem	2
1.1.1	Single-objective optimization formulation	2
1.1.2	Multi-objective optimization formulation	4
1.2	Optimization methods	5
1.2.1	Zero order methods	5
1.2.1.1	Random search and random walk	5
1.2.1.2	Simulated annealing	6
1.2.1.3	Evolutionary algorithms	6
1.2.1.4	Recent advances in EA	11
1.2.1.5	Other zero order methods	13
1.2.2	First order methods	13
1.2.2.1	Overview of methods	13
1.2.2.2	Computation of the gradient	13
1.2.3	Second order methods	14
1.2.4	Discussion	15
2	VKI Optimization code	17
2.1	History	17
2.2	Design vector	18
2.3	Accurate evaluation	19
2.4	Performance vector	20
2.5	Database	21
2.6	Metamodel	21
2.6.1	Response surfaces models	22
2.6.2	Artificial neural networks	22
2.6.3	Radial basis function networks	24
2.6.4	Kriging	26
2.7	Genetic algorithm	29
3	Applications	33
3.1	Minimization of test functions	33
3.1.1	De Jong test function	34
3.1.2	Rosenbrock test function	34
3.1.3	Michalewicz test function	35
3.1.4	Rastrigin test function	35
3.1.5	Six hump camel back test function	36
3.1.6	Applications	37

3.2	Optimization of a compressor for micro gas turbine applications	37
3.2.1	Geometry definition	38
3.2.2	Boundary conditions	40
3.2.3	Geometry evaluation	41
3.2.4	Performance	42
3.2.5	Metamodel	44
3.2.6	Genetic algorithm	45
3.2.7	Database	45
3.2.8	Results	45
3.2.9	Conclusions	49
3.3	Optimization of the cooling channels in a gas turbine blade	49
3.3.1	Geometry definition	51
3.3.2	Geometry evaluation	52
3.3.3	Performance	52
3.3.4	Database	53
3.3.5	Genetic algorithm	53
3.3.6	Metamodels	54
3.3.7	Results	54
3.3.8	Conclusions	59
	References	61
