

**ROBUST DESIGN, APPROXIMATION METHODS AND SELF
ORGANIZING MAP
TECHNIQUES FOR MDO PROBLEMS. APPLICATION IN
AERONAUTICS AND TURBOMACHINERY**

V. Pediroda¹ and C. Poloni¹

Dipartimento di Ingegneria Meccanica, Università di Trieste, via Valerio 10, 34100 Trieste,
Italy

Contents

1 INTRODUCTION	2
2 THE IDEA OF ROBUST DESIGN IN AERONAUTICS.....	3
2.1 WHY WE NEED A MULTI OBJECTIVE APPROACH	7
2.2 NUMERICAL EXAMPLE.....	9
3 EVIDENCE FROM PRACTICAL CASES.....	11
3.1 OPTIMISATION OF AN ENGINE CRANKSHAFT TAKING INTO CONSIDERATION MACHINING TOLLERANCES OF THE LUBRICATION BEARING.....	11
3.1.1 MODEL PARAMETERIZATION	11
3.1.2 STOCHASTIC ANALYSIS RESULTS.....	12
3.2 ROBUSTNESS ANALYSIS OF THE FLUTTER SPEED OF A TOURISTIC AIRPLANE	14
3.3 DRAG COMPUTATION OF AN AXISIMMETRIC BODY IN LAMINAR FLOW	15
4 GAME THEORY ON ROBUST DESIGN.....	18
4.1 MULTI OBJECTIVE GAME THEORY ADAPTIVE ALGORITHMS	19
5 THE USE OF LOCAL OPTIMAL RESPONSE SURFACES IN ROBUST DESIGN.....	20
5.1 D.A.C.E. RESPONSE SURFACE METHODOLOGY	20
5.2 ADAPTIVE DACE	22
5.3 NUMERICAL EXAMPLE OF ADAPTIVE DACE IN ROBUST DESIGN.....	23
6 UNCERTAINTY QUANTIFICATION METHODS BASED ON GENERALIZED POLYNOMIAL CHAOS.....	26
6.1 SETTING OF THE PROBLEM: STOCHASTIC DIFFERENTIAL EQUATION.....	26
6.2 THE GENERALIZED POLYNOMIAL CHAOS.....	26
6.3 CHAOS POLYNOMIAL AND CHAOS COLLOCATION.....	28
6.4 NUMERICAL EXAMPLE.....	29
7 PROBLEM OF VISUALISATION IN N-DIMENSIONAL SPACE (SOM).....	33
7.1 THE ALGORITHM	34
7.2 APPLICATION TO IRIS DATASET.....	35
8. EXHAUSTIVE EXAMPLE: MULTI OBJECTIVE ROBUST DESIGN OPTIMIZATION OF AN AIRFOIL.....	38
8.1 RESULTS	39
9 REFERENCES	44
