

Closed-loop flow control

Part 2) Adaptive and model predictive control

Rudibert King*
Chair of Measurement and Control
Berlin University of Technology
Germany

February 6, 2009

Contents

1	Introduction	3
2	Extremum- and slope-seeking	5
2.1	Extremum-seeking control	5
2.2	Slope-seeking control	8
2.3	Kalman filter	10
2.4	Applications	11
3	Model predictive control	17
3.1	Unconstrained linear MPC	19
3.2	Constrained MPC and NMPC	20
3.3	Drag reduction of an Ahmed body	20
3.4	2D flow around a circular cylinder	23
3.4.1	Galerkin model for predicting the future development	23
3.4.2	Closed-loop control	24
4	Conclusions	27

*Part of this work was supported by the German Research Foundation (DFG) through the Collaborative Research Center SFB 557 'Control of complex turbulent shear flows. Special thanks go to Bernd. R. Noack, Lars Henning and the PhD students Katarina Aleksic and Rifet Muminovic.
