

# Control of jet noise

Peter Jordan

Laboratoire d'Etudes Aérodynamiques, UMR-CNRS-6609,  
Université de Poitiers, ENSMA, France

6 March 2009

## Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Jet noise theory</b>	<b>5</b>
2.1	The wave equation . . . . .	5
2.2	Green's functions . . . . .	6
2.3	Lighthill's acoustic analogy . . . . .	8
2.3.1	Dimensional analysis . . . . .	10
2.3.2	Statistical analysis . . . . .	11
2.3.3	Instantaneous analysis . . . . .	13
<b>3</b>	<b>Coherent structures</b>	<b>17</b>
3.1	The turbulent jet . . . . .	17
3.2	Source mechanisms . . . . .	18
<b>4</b>	<b>Some case-studies</b>	<b>23</b>
4.1	Chevrons . . . . .	23
4.2	Fluidic control . . . . .	25
4.2.1	Non-converging microjets . . . . .	25
4.2.2	Converging microjets . . . . .	26
4.3	A low Re 2-D noise-controlled mixing-layer . . . . .	27
<b>5</b>	<b>Conclusion</b>	<b>31</b>
