

**AEROACOUSTICS OF WALL-BOUNDED FLOWS
FUNDAMENTALS OF AEROACOUSTICS**

Michel Roger, Ecole Centrale de Lyon

CONTENT

I INTRODUCTION

II AERODYNAMIC NOISE GENERATION – BASIC MECHANISMS

- II-1 Direct Sound Radiation Mechanisms**
- II-2 Acoustic Back-Reactions**

III DISTURBANCES IN THE EQUATIONS OF GAS DYNAMICS

- III-1 First-order disturbances**
- III-2 Second-order theory**

IV THE EQUATIONS OF LINEAR ACOUSTICS

- IV-1 The Homogeneous Wave Equation**
- IV-2 Acoustic Sources**
- IV-3 Fundamental Solutions of the Homogeneous Wave Equation**
- IV-4 Noise Levels**

V ACOUSTIC ANALOGIES

- V-1 Introduction**
- V-2 Lighthill's Acoustic Analogy**
- V-3 Sound and Pseudo-Sound**
- V-4 Other Analogies**

VI THE FORMULATION OF FLOWCS WILLIAMS AND HAWKINGS

- VI-1 The Wave Equation**
- VI-2 Usual Approximations**
- VI-3 Penetrable Surfaces and the Extended Analogy**
- VI-4 Plurality of interpretations**

VII THE GREEN'S FUNCTION TECHNIQUE – MOVING ACOUSTIC SOURCES

- VII-1 General Solution**
- VII-2 Radiation From Moving Sources**
- VII-3 Doppler Effect**
- VII-4 The Convected Wave Equation**
- VII-5 Fundamental Properties of Acoustic Sources**
- VII-6 Tailored Green's functions**

VIII SOLUTION OF FLOWCS WILLIAMS –HAWKINGS' EQUATION

- VIII-1 Formal Solution**
- VIII-2 Far-Field Noise Radiation**
- VIII-3 Compact Sources in Motion**
- VIII-4 Dimensional Analysis**
