

Airfoil Noise : Hybrid Approaches (Continued)

J. Christophe *

von Karman Institute for Fluid Dynamics

March 2009

Contents

| | | |
|----------|--|-----------|
| 1 | Jet-Airfoil interaction application | 3 |
| 1.1 | Definition of the considered case | 3 |
| 1.2 | Experimental setup | 3 |
| 1.3 | Numerical setup | 4 |
| 1.4 | Acoustic methods | 5 |
| 1.4.1 | Curle's analogy | 5 |
| 1.4.2 | Amiet's theory - Leading edge formulation | 7 |
| 1.4.3 | Amiet's theory in spanwise-varying flow conditions | 9 |
| 1.5 | Aerodynamic results | 13 |
| 1.6 | Acoustic results | 15 |
| A | Aeroacoustic transfer functions | 23 |

*Ph.D. Candidate, Environmental and Applied Fluid Dynamics Department, Chaussée de Waterloo 72, 1640 Rhode-St-Genèse, Belgium. christju@vki.ac.be. This work is supported by a fellowship from Fond pour la Formation à la Recherche dans l'Industrie et dans l'Agriculture (F.R.I.A.)
