

# NOISE FROM AUTOMOTIVE COMPONENTS

Xavier Gloerfelt  
Arts et Métiers ParisTech, France.

## Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>Introduction</b>   | <b>3</b>  |
| 1.1      | Automotive noise . . . . .                                  | 3         |
| 1.2      | Aeroacoustic sources . . . . .                              | 4         |
| <b>2</b> | <b>Experimental techniques</b>                              | <b>5</b>  |
| 2.1      | Semi-anechoic wind tunnels . . . . .                        | 5         |
| 2.2      | Surface pressure measurements . . . . .                     | 9         |
| 2.3      | Acoustic imaging . . . . .                                  | 10        |
| <b>3</b> | <b>Numerical simulations</b>                                | <b>13</b> |
| 3.1      | Computational strategies . . . . .                          | 13        |
| 3.2      | Hybrid methods . . . . .                                    | 15        |
|          | CFD solvers . . . . .                                       | 15        |
|          | Lighthill’s acoustic analogy and its extensions . . . . .   | 15        |
|          | Stochastic methods . . . . .                                | 16        |
| <b>4</b> | <b>Wind noise from accessories</b>                          | <b>17</b> |
| 4.1      | Rear-view mirror . . . . .                                  | 17        |
| 4.2      | Roof carrier system . . . . .                               | 23        |
| <b>5</b> | <b>Cavity noise</b>   | <b>24</b> |
| 5.1      | Sunroof buffeting . . . . .                                 | 24        |
| 5.2      | Open window . . . . .                                       | 27        |
| 5.3      | Door gap cavities . . . . .                                 | 28        |
| <b>6</b> | <b>Boundary layer noise</b>                                 | <b>35</b> |
| 6.1      | Aerodynamic noise from a turbulent boundary layer . . . . . | 35        |

|          |  |           |
|----------|--|-----------|
| 6.2      | Wall-pressure beneath a turbulent boundary layer . . . . . | 36        |
| 6.3      | Coupling with vibrational modes . . . . .                  | 39        |
| 6.4      | Structural buffeting of the windows . . . . .              | 43        |
| <b>7</b> | <b>Fan noise and internal noise</b>                        | <b>45</b> |
| <b>8</b> | <b>Concluding remarks</b>                                  | <b>46</b> |
