

# Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
<b>2</b>	<b>Fluid dynamics</b>	<b>4</b>
2.1	Conservation laws . . . . .	4
2.2	Constitutive equations . . . . .	7
2.3	Entropy equation . . . . .	10
2.4	Boundary conditions . . . . .	12
2.5	Vorticity and potential flows . . . . .	12
<b>3</b>	<b>Lighthill's analogy</b>	<b>13</b>
<b>4</b>	<b>Acoustics of a quiescent fluid</b>	<b>16</b>
4.1	Wave equation . . . . .	16
4.2	Elementary solutions . . . . .	17
4.3	Acoustical energy and acoustical impedance . . . . .	18
4.4	Range of validity of acoustical approximation . . . . .	20
4.5	Acoustical field of a harmonically pulsating or translating sphere . . . . .	22
4.6	Green's function and integral formulation . . . . .	28
4.7	Multipole expansion . . . . .	31
4.8	Doppler effect . . . . .	33
4.9	Influence of walls . . . . .	35
4.10	Influence of a compact body on radiation . . . . .	37
<b>5</b>	<b>Waves in pipes</b>	<b>40</b>
5.1	Pipe modes . . . . .	40
5.2	One dimensional Green's function for infinite pipe . . . . .	44
5.3	Reflections at pipe discontinuities at low frequencies. . . . .	45
5.4	The open pipe termination in quiescent fluid . . . . .	50
5.5	Simple resonators in pipe systems . . . . .	52
5.6	Helmholtz resonator . . . . .	57
5.7	Bubble resonance . . . . .	60
5.8	Self-sustained oscillations . . . . .	61
5.9	The clarinet . . . . .	66
<b>6</b>	<b>Vortex-sound theory</b>	<b>69</b>
6.1	Paradox of D'Alembert and flow separation . . . . .	69
6.2	Vortex-sound analogy . . . . .	73
6.3	Vortex dynamics . . . . .	75
6.4	Dipole character of vortex sound . . . . .	76
6.5	Grazing flow along a Helmholtz resonator . . . . .	79
6.6	Low frequency behaviour of an open pipe termination . . . . .	85
6.7	High amplitude response of resonators . . . . .	91

<b>7</b>	<b>Turbulent noise</b>	<b>93</b>
7.1	Turbulence . . . . .	93
7.2	Isothermal free jets . . . . .	95
7.3	Low frequency behaviour of a jet in an infinite pipe . . . . .	98
7.4	Low frequency turbulent sound production by a diaphragm. . . . .	99
7.5	Free jet in a bubbly liquid . . . . .	102
