

## Table of content

<b>NOMENCLATURE .....</b>	<b>4</b>
<b>INTRODUCTION.....</b>	<b>5</b>
<b>PART 1 – NUMERICAL DEVELOPMENT TO RUN FLOW SOLVERS ON MASSIVELY PARALLEL PLATFORMS.....</b>	<b>7</b>
<b>1.1 Introduction.....</b>	<b>7</b>
<b>1.2 Computing architectures and parallel programming .....</b>	<b>7</b>
1.2.1 Computing architectures .....	8
1.2.2 Message passing protocols .....	9
1.2.3 Graph theory.....	12
<b>1.3 Two flow solvers with HPC capabilities.....</b>	<b>13</b>
1.3.1 <i>elsA</i> : a structured multi-block flow solver .....	13
1.3.2 AVBP: an unstructured flow solver .....	14
<b>1.4 From sequential to massively parallel .....</b>	<b>15</b>
1.4.1 Estimation of the theoretical efficiency.....	15
1.4.2 Strategies for mesh partitioning and load balancing .....	17
1.4.3 Impact on data management.....	23
<b>1.5 Parallel programming and scheduling.....</b>	<b>23</b>
1.5.1 Parallel implementation in the flow solver <i>elsA</i> .....	23
1.5.2 Parallel implementation in the flow solver AVBP.....	24
<b>1.6 Conclusion and further works .....</b>	<b>26</b>
<b>PART 2 - ADVANCED SIMULATIONS OF INDUSTRIAL FLOWS .....</b>	<b>27</b>
<b>2.1 Introduction.....</b>	<b>27</b>
<b>2.2 Performance indicators for industrial applications .....</b>	<b>27</b>
2.2.1 Definition of the normalized speed-up.....	27
2.2.2 Overview of the flow solvers scalability .....	28
<b>2.3 Application to combustion chambers.....</b>	<b>29</b>
2.3.1 Challenges for turbulent reactive flows .....	29
2.3.2 Recent use of LES in industrial applications .....	30
<b>2.4 Application to civil aircrafts .....</b>	<b>33</b>
<b>2.5 Application to turbomachines.....</b>	<b>36</b>
2.5.1 Compressor test case .....	36
2.5.2 Comparison of unsteady and steady flow simulations .....	38
<b>2.6 Conclusion .....</b>	<b>39</b>
<b>CONCLUSION AND PERSPECTIVES .....</b>	<b>40</b>
<b>ACKNOWLEDGMENT .....</b>	<b>41</b>
<b>BIBLIOGRAPHY .....</b>	<b>41</b>
