

High Performance Computing for Advanced Industrial Applications

Serge Bogaerts, Philippe Geuzaine, Ingrid Lepot
Cenaero, Belgium

VKI LS High performance computing of industrial flows
6-8 May 2009

Contents

1	Introduction	3
2	CFD applications	5
2.1	Near-field study of a fuselage wake	6
2.2	Study of the unsteady flow around a landing gear	9
3	High pressure compressor 3D hub optimization	13
3.1	Parameterization and CAD access	14
3.2	Optimization platform	14
3.3	Hub endwall optimization	15
3.4	Flow description	17
3.5	Further developments	19
4	HPC infrastructure in practice	21
4.1	A typical HPC system configuration	21
4.2	Environmental constraints	22
5	Acknowledgements	25
