

# Contents

<b>1</b>	<b>Introduction</b>	<b>6</b>
<b>2</b>	<b>Balance equations</b>	<b>8</b>
2.1	Instantaneous balance equations . . . . .	8
2.2	Reynolds and Favre averaging . . . . .	10
2.3	Favre averaged balance equations . . . . .	11
2.4	Filtering and Large Eddy Simulation . . . . .	12
<b>3</b>	<b>Major properties of premixed, nonpremixed and partially premixed flames</b>	<b>15</b>
3.1	Laminar premixed flames . . . . .	15
3.1.1	General characteristics . . . . .	15
3.1.2	Self-similar behaviour . . . . .	16
3.2	Laminar diffusion flames . . . . .	18
3.3	Partially premixed flames . . . . .	25
<b>4</b>	<b>A direct analysis: Taylor’s expansion</b>	<b>27</b>
<b>5</b>	<b>Scales and diagrams for turbulent combustion</b>	<b>28</b>
5.1	Introduction . . . . .	28
5.2	Turbulent premixed combustion diagram . . . . .	29
5.2.1	Introduction . . . . .	29
5.2.2	Combustion regimes . . . . .	29
5.2.3	Comments . . . . .	33
5.3	Nonpremixed turbulent combustion diagram . . . . .	33
5.3.1	Introduction . . . . .	33
<b>6</b>	<b>Tools for turbulent combustion modeling</b>	<b>37</b>
6.1	Introduction . . . . .	37
6.2	Scalar dissipation rate . . . . .	37
6.3	Geometrical description . . . . .	40
6.3.1	G-field equation . . . . .	40
6.3.2	Flame surface density description . . . . .	42
6.3.3	Flame wrinkling description . . . . .	45
6.4	Statistical approaches: Probability density function . . . . .	46
6.4.1	Introduction . . . . .	46
6.4.2	Presumed probability density functions . . . . .	47
6.4.3	Pdf balance equation . . . . .	48
6.4.4	Joint velocity/concentrations pdf . . . . .	50
6.4.5	Conditional Moment Closure (CMC) . . . . .	51
6.5	Similarities and links between the tools . . . . .	51
<b>7</b>	<b>Chemistry for turbulent combustion</b>	<b>54</b>
7.1	Global schemes . . . . .	55
7.2	Automatic reduction - Tabulated chemistries . . . . .	56
7.2.1	Intrinsic Low Dimensional Manifold (ILDM) . . . . .	56
7.2.2	Flame prolongation of ILDM - Flamelet generated manifold . . . . .	57
7.2.3	Taking advantage of self-similarity properties of turbulent premixed flames . . . . .	58
7.3	In situ adaptive tabulation (ISAT) . . . . .	58

<b>8</b>	<b>Reynolds-averaged models for turbulent premixed combustion</b>	<b>59</b>
8.1	Turbulent flame speed	59
8.2	Eddy-Break-Up model	59
8.3	Bray-Moss-Libby (BML) model	60
8.3.1	Introduction	60
8.3.2	BML model analysis	62
8.3.3	Recovering mean reaction rate from tools relations	64
8.3.4	Reynolds and Favre averaging	65
8.3.5	Conditional averaging - Counter-gradient turbulent transport	66
8.4	Models based on the flame surface area estimation	68
8.4.1	Introduction	68
8.4.2	Algebraic expressions for the flame surface density $\Sigma$	68
8.4.3	Flame surface density balance equation closures	73
8.4.4	Analysis of the flame surface density balance equation	76
8.4.5	Flame stabilization modeling	81
8.4.6	A related approach: $G$ -equation	82
8.5	Scalar dissipation rate and presumed PDF modeling	82
8.5.1	Modeling progress variable dissipation rate with propagating flamelets	82
8.5.2	Modeling premixed turbulent combustion using presumed PDF and detailed chemistry	87
<b>9</b>	<b>Turbulent transport in premixed combustion</b>	<b>92</b>
9.1	Introduction	92
9.2	Direct numerical simulation analysis of turbulent transport	93
9.2.1	Introduction	93
9.2.2	Results	93
9.3	Physical analysis	97
9.4	External pressure gradient effects	99
9.5	Counter gradient transport - Experimental results	102
9.6	To include counter-gradient turbulent transport in modeling	103
9.7	Towards a conditional turbulence modeling ?	104
<b>10</b>	<b>Reynolds averaged models for nonpremixed turbulent combustion</b>	<b>105</b>
10.1	Introduction	105
10.2	Fuel/Air mixing modeling	107
10.2.1	Introduction	107
10.2.2	Balance equation and simple relaxation model for $\tilde{\chi}$	107
10.3	Models assuming infinitely fast chemistry	109
10.3.1	Eddy Dissipation Model	109
10.3.2	Presumed pdf: infinitely fast chemistry model (IFCM)	109
10.4	Flamelet modeling	110
10.4.1	Introduction	110
10.4.2	Flame structure in composition space, $Y_i^{SLFM}(Z^*, \chi^*)$	110
10.4.3	Mixing modeling in SLFM	115
10.4.4	Conclusion	116
10.5	Flame surface density modeling, Coherent Flame Model (CFM)	116
10.6	MIL model	117
10.7	Conditional Moment Closure (CMC)	119
10.8	Pdf modeling	120
10.8.1	Turbulent micromixing	122

10.8.2	Linear relaxation model, IEM/LMSE	123
10.8.3	GIEM model	124
10.8.4	Stochastic micromixing closures	125
10.8.5	Interlinks PDF / Flame surface modeling	128
10.8.6	Joint velocity/concentrations pdf modeling	128
10.9	RANS PCM of turbulent non-premixed jet-flames	129
10.9.1	Background	130
10.9.2	PCM	131
10.9.3	First order approximation	135
10.9.4	Second order approximation	136
10.9.5	SANDIA D-Flame with FTC-PCM	137
<b>11</b>	<b>Large eddy simulation</b>	<b>144</b>
11.1	Introduction	144
11.2	Unresolved turbulent fluxes modeling	144
11.2.1	Smagorinsky model	144
11.2.2	Scale similarity model	145
11.2.3	Germano dynamic model	145
11.2.4	Structure function models	146
11.2.5	Gradient model	146
11.2.6	Unresolved scalar transport	147
11.3	Simplest approaches for combustion modeling	147
11.3.1	Arrhenius law based on filtered quantities	147
11.3.2	Extension of algebraic Favre averaged approaches	147
11.3.3	Simple extension of the Germano dynamic model	148
11.4	LES models for non premixed combustion	148
11.4.1	Linear Eddy Model	148
11.4.2	Dynamic micro-mixing model	149
11.4.3	Probability Density functions	150
11.4.4	PCM-FPI for partially premixed combustion diluted by burnt gases.	151
11.5	LES models for premixed combustion	155
11.5.1	Introduction	155
11.5.2	Artificially thickened flames	155
11.5.3	<i>G</i> -equation	156
11.5.4	Filtering the progress variable balance equation	158
11.5.5	SGS variance of progress variable	160
11.5.6	FSD-PDF SGS modeling: LES of premixed turbulent flames with tabulated detailed chemistry	162
11.6	A comment about dynamic modelling for turbulent combustion	167
11.7	Numerical costs	168
11.8	Comparison with experimental data	169
11.9	Examples	171
11.9.1	Scalar transport	171
11.9.2	Premixed flame laboratory experiment	172
11.9.3	Lifted methane-air jet flame in a vitiated coflow	175
11.9.4	Gas turbine combustor	180
11.9.5	Internal combustion engines	186
11.9.6	LES of combustion including radiative heat transfer	189
<b>12</b>	<b>Conclusion</b>	<b>195</b>
