Contents

1	Introduction	3
2	Semi-Discrete Formulation	5
2.1	Advection Diffusion Equation	5
2.2	Variational Formulation	5
2.3	Approximate Solution	6
2.4	Numerical Fluxes	8
2.5	Nodal Integration	9
2.6	The Semi-Discrete Formulation	12
3	Fully-Discrete Formulation	13
3.1	Space-Time Expansion	14
3.2	A Local Galerkin Predictor	16
3.3	Runge Kutta Predictor	17
4	Time Adaptivity	19
4.1	Local time-stepping algorithm	19
4.2	Stability and Time Step Restriction	22
4.2.1	One Dimensional Advection	22
4.2.2	One Dimensional Diffusion	23
4.3	Stability of local time-stepping	25
4.3.1	One dimensional advection	26
4.3.2	One Dimensional Diffusion	27
4.4	Stability in Multi Dimensions	29
4.4.1	Linear Advection	29
4.4.2	Euler equations	31
4.4.3	Diffusion	34
4.5	Navier-Stokes equations	34

5	Space Adaptivity	36
5.1	Implementation Issues	36
5.1.1	Data Structure	36
5.1.2	Split-History	36
5.2	'Block Unstructured' Grid Generation	37
5.3	Mesh Pre-Processing Strategies	38
5.4	Automatic Mesh Adaption I: Control	39
5.4.1	Flagging and Indicators	39
5.4.2	Limiting due to Resources	41
5.4.3	Modifying the Adaptation Algorithms	41
5.5	Automatic Mesh Adaption II: Implementation	42
5.5.1	Splitting of Grid Cells	43
5.5.2	Merging of Grid Cells I: Local Synchronization	44
5.5.3	Merging of Grid Cells II: Implementation	44
5.6	Examples	46
5.6.1	Laminar Time Periodic Flow Past a Sphere	46
5.6.2	Laminar Flow past a NACA0012 airfoil	49
6	Model Adaptivity	52
6.1	Shock Capturing	52
6.1.1	Subcell resolution	54
6.1.2	The Double Mach Reflection Problem	54
6.1.3	Spatial adaptivity and shock capturing	55
6.2	Divergence Correction for MHD	56
6.2.1	Advancement of the GLM Divergence Correction Method	58
6.2.2	Sensor Strategy	59
7	Conclusions	61
8	Acknowledgements	62
A	Coefficients for CERK schemes	63
