1	Introduction	4
2	DG approximation of a nonlinear conservation law	5
2.1	Differential and weak formulation of a scalar conservation law	5
2.2	Discontinuous Galerkin approximation of a scalar conservation law	6
2.3	Discrete discontinuous Galerkin equations	9
3	DG space discretization of the Linear Advection Equation	10
4	Smoothing properties of multistage Runge-Kutta schemes	12
4.1	Computation of the steady state solution	12
4.2	Modal analysis	13
5	Eigenstructure of the DG discretization operator for the Linear Advection Equation	14
5.1	FV space discretization	14
5.2	DG space discretization	16
6	Smoothers for the Linear Advection Equation	18
6.1	Basic concepts of Multigrid algorithms	18
6.2	h -Multigrid and FV space discretization	18
6.3	p -Multigrid and Discontinuous Galerkin space discretization	20
7	The p-MG algorithm	24
7.1	The p -version of the Full Approximation Scheme	26
7.2	Solution and error transfer operators	27
7.3	Residual restriction operator	27
7.4	Semi-implicit Runge-Kutta smoother	28
7.5	Backward Euler smoother	29
8	p-MG test calculations	29
8.1	Comparison among different Runge-Kutta smoothers	29
8.1.1	Inviscid flow through a channel with a bump	30
8.1.2	Inviscid flow around a circle	32
8.2	Comparison between p -FMG and a fully implicit solver	32
8.2.1	Inviscid flow around a circle at $M_\infty = 0.38$	33
8.2.2	Laminar viscous flow around the NACA0012 airfoil	35
8.2.3	Laminar viscous flow around the ADIGMA BTC0 3D body	36
9	Conclusions	36
