

ADVANCED MASS TRANSPORT MODELS

S. Van Damme
Vrije Universiteit Brussel,
Research Group of Electrochemical and Surface Engineering,
Pleinlaan 2, 1050 Brussel, Belgium

1 December 2009

Contents

1	Introduction	3
2	Irreversible thermodynamics	3
2.1	Balance laws	3
2.1.1	Chemical balance laws	3
2.1.2	Mass conservation law	4
2.1.3	Charge conservation law	4
2.1.4	Momentum conservation law	4
2.1.5	Internal energy balance law	5
2.2	Force laws	6
2.2.1	The gravitational potential	6
2.2.2	The electrical potential	6
2.3	Equations of state	7
2.4	Phenomenological equations	8
2.4.1	Entropy balance law	8
2.4.2	Restrictions to the phenomenological coefficients	10
2.5	Summary	12
3	Statistical mechanics	13
3.1	Ensembles	13
3.2	The Liouville equation and the BBGKY hierarchy	13
3.3	Equilibrium statistical mechanics	14
3.4	Nonequilibrium statistical mechanics	15
4	Mass transport models	15
5	The (generalised) mean spherical approximation	16
