

Introduction to Aero-Engine Gas Turbine Combustion

	Page
0. ABBREVIATIONS	5
1. INTRODUCTION	7
1.1 Combustion Principles	7
1.2 General Combustor Design	10
1.3 Combustor Configurations	11
2. AERO-ENGINE COMBUSTION REQUIREMENTS	15
2.1 Performance Requirements	15
2.2 Interface Requirements	16
2.3 Engine Operability Requirements	17
2.4 Emissions Requirements	19
3. COMBUSTOR DESIGN PRINCIPLES	20
3.1 Basic Design Consideration – Terminology	20
3.2 Diffuser Design	23
3.3 Combustor	25
4. FUEL PREPARATION AND IGNITION	29
4.1 Pressure Atomiser	29
4.2 Vaporizer	30
4.3 Airblast Atomiser	31
4.4 Ignition System	32
5. COMBUSTOR COOLING AND MATERIALS	33
5.1 Basic Design Considerations	33
5.2 Cooling style selection	34
5.3 Preliminary design and refinement	34
5.4 Specific considerations for effusion and impingement effusion cooling schemes	36
5.5 Material selection for combustor wall	37
5.6 Validation of temperature prediction	40
5.7 Manufacturing	41
6. COMBUSTION CFD MODELLING	43
6.1 Flow Field Modelling	43
6.2 Combustion Modelling	45
6.3 Emissions Modelling	46
6.4 Spray Modelling	47
6.5 Application to gas turbine combustion	48
7. COMBUSTOR VALIDATION	53
7.1 Combustion Rig Testing – Motivation and Main Requirements	53
7.2 Component Development Programme (CDP)	54
7.3 Engine Development Programme (EDP)	58
7.4 Low Emissions Combustion Validation	60
8. EMISSIONS LEGISLATION AND REQUIREMENTS	62
8.1 Emissions Legislation	62
8.2 Emissions Requirements and Local Landing Charges	66
8.3 ACARE Targets	66
8.4 Future fuels – synthetic fuels	69

9. LOW EMISSIONS COMBUSTION TECHNOLOGIES	70
9.1 Future Engine Development	70
9.2 Rich Burn Combustion	72
9.3 Lean Burn Combustion	76
9.4 Variable Geometry	82
10. CONCLUSIONS	83
11. REFERENCES	84
