Contents

1	Introduction	3
1.1	Context: unsteady combustion	3
1.2	Large Eddy Simulation methods	6
2	Instabilities	7
2.1	An equation for $\ln(\mathbf{P})$ in reacting flows	7
2.2	A wave equation in low Mach-number reacting flows	8
2.3	Acoustic velocity and pressure in low-speed reacting flows	10
2.4	Acoustic jump conditions for thin flames	10
2.5	Three-dimensional Helmholtz tools	12
2.6	The acoustic energy balance in reacting flows	14
3	LES of instabilities	16
3.1	LES and Numerical models	17
3.2	Parallelism	17
3.3	Target configuration	18
3.4	LES of a self-excited azimuthal mode	19
3.5	Individual burner transfer function	24
4	LES of ignition	25
4.1	Ignition in gas turbines chambers	25
4.2	LES solver for two-phase flows	28
4.3	Spray modeling	28
4.4	Combustion modeling	30
4.5	Configuration	31
4.5.1	Geometry and boundary conditions	31
4.5.2	Modeling of the igniters	32
4.5.3	Mesh	33
