

Numerical Implementation of Large-Eddy Simulation

Pierre Sagaut
Institut Jean Le Rond d'Alembert - UMR 7190
Université Pierre et Marie Curie - Paris 6
Paris, France

February 8, 2010

Contents

| | | |
|----------|--|-----------|
| 1 | Scope of the lecture and references | 3 |
| 2 | Practice & Theory | 5 |
| 2.1 | LES: statement of the problem | 5 |
| 2.2 | LES: mathematical models | 8 |
| 2.2.1 | The filtered Navier-Stokes equations model | 8 |
| 2.2.2 | A more realistic model: the twice-filtered Navier-Stokes equations | 11 |
| 2.2.3 | Statistical mathematical models | 12 |
| 3 | Implicit couplings | 15 |
| 3.1 | Statement of the problem | 15 |
| 3.2 | Static and dynamic analysis | 15 |
| 3.3 | Observations in non-homogeneous flows | 23 |
| 3.3.1 | Plane channel flow case | 23 |
| 3.3.2 | Circular cylinder case | 26 |
| 4 | Re-defining accuracy | 33 |
| 4.1 | Statement of the problem | 33 |
| 4.2 | Verstappen's schemes | 34 |
| 4.2.1 | Fundamentals | 34 |
| 4.2.2 | Bridging with LES | 35 |
| 4.2.3 | A few results | 36 |
| 4.3 | Compressible flows: a brief introduction | 38 |
| 4.3.1 | Fundamentals | 38 |
| 4.3.2 | An example: Entropy-conservation-based schemes | 38 |
| 4.4 | Order of accuracy vs. global reliability | 40 |
| 4.4.1 | Statement of the problem | 40 |
| 4.4.2 | Defining an error norm | 40 |
| 4.4.3 | A few results | 44 |
| 4.5 | Concluding remarks | 48 |

| | | |
|----------|---|-----------|
| 5 | LBM-LES | 51 |
| 5.1 | Fundamentals | 51 |
| 5.2 | IR consistent models for LBM-BGK | 52 |
| 5.2.1 | General formulation for eddy-viscosity closures | 52 |
| 5.2.2 | Concept of Inertial-Range Consistency and IRC Smagorinsky model | 52 |
| 5.2.3 | An example: D3Q19 implementation | 53 |
| 5.3 | Approximate Deconvolution Methods for LBM-LES | 54 |
| 5.3.1 | High-order deconvolution method | 54 |
| 5.3.2 | Simplified procedure | 55 |
