

# Large-Eddy Simulation and flows with system rotation: state-of-the-art

Pierre Sagaut  
Institut Jean Le Rond d'Alembert - UMR 7190  
Université Pierre et Marie Curie - Paris 6  
Paris, France

August 4, 2010

## Contents

<b>1</b>	<b>Scope of the lecture and references</b>	<b>3</b>
1.1	Generals . . . . .	3
1.2	Reading these lecture notes . . . . .	4
<b>2</b>	<b>Practice &amp; Theory</b>	<b>5</b>
2.1	LES: statement of the problem . . . . .	5
2.2	LES: mathematical models . . . . .	8
2.2.1	The filtered Navier-Stokes equations model . . . . .	8
2.2.2	A more realistic model: the twice-filtered Navier-Stokes equations . . . . .	11
2.2.3	Statistical mathematical models . . . . .	12
<b>3</b>	<b>Finding a LES model for flows with discontinuities</b>	<b>15</b>
3.1	Generals . . . . .	15
3.2	Filtering approach for flows with shocks . . . . .	15
3.2.1	Statement of the problem . . . . .	15
3.2.2	Definition of filtered variables and parasitic jump contributions . . . . .	15
3.2.3	Filtered governing equations and generalized jump relations . . . . .	18
3.3	Microscopic, mesoscopic and macroscopic LES approximations for discontinuous flows . . . . .	19
<b>4</b>	<b>Explicit subgrid scale models</b>	<b>21</b>
4.1	Functional subgrid scale models . . . . .	21
4.1.1	The basic model . . . . .	21
4.1.2	A few improvement strategies . . . . .	23
4.2	Structural subgrid scale models . . . . .	28
4.2.1	Soft deconvolution models . . . . .	28
4.2.2	Full reconstruction of subgrid scales . . . . .	30
4.3	Extension for compressible flows . . . . .	31

<b>5</b>	<b>The boundary condition issue</b>	<b>33</b>
5.1	General statement of the problem . . . . .	33
5.2	Turbulent inflow conditions . . . . .	33
5.2.1	Stochastic turbulence generation methods . . . . .	34
5.2.2	Deterministic methods . . . . .	34
5.3	Solid walls on coarse grids: wall models . . . . .	36
5.3.1	Statement of the problem . . . . .	36
5.3.2	A few wall models . . . . .	38
<b>6</b>	<b>LES validation</b>	<b>40</b>
6.1	Sensitivity and efficiency . . . . .	40
6.2	Validation procedures . . . . .	40
<b>7</b>	<b>Implicit couplings with numerics</b>	<b>43</b>
7.1	Statement of the problem . . . . .	43
7.2	Static and dynamic analysis . . . . .	43
7.3	Observations in non-homogeneous flows . . . . .	53
7.3.1	Plane channel flow case . . . . .	53
7.3.2	Circular cylinder case . . . . .	55
<b>8</b>	<b>Re-defining accuracy</b>	<b>59</b>
8.1	Statement of the problem . . . . .	59
8.2	Verstappen's schemes . . . . .	60
8.2.1	Fundamentals . . . . .	60
8.2.2	Bridging with LES . . . . .	61
8.2.3	A few results . . . . .	62
8.3	Compressible flows: a brief introduction . . . . .	64
8.3.1	Fundamentals . . . . .	64
8.3.2	An example: Entropy-conservation-based schemes . . . . .	64
8.4	Order of accuracy vs. global reliability . . . . .	66
8.4.1	Statement of the problem . . . . .	66
8.4.2	Defining an error norm . . . . .	66
8.4.3	A few results . . . . .	70
8.5	Concluding remarks . . . . .	74
<b>9</b>	<b>Lattice-Boltzmann - LES</b>	<b>77</b>
9.1	Fundamentals . . . . .	77
9.2	Subgrid viscosity models for LBM-BGK . . . . .	78
9.2.1	General formulation for eddy-viscosity closures . . . . .	78
9.2.2	Concept of Inertial-Range Consistency and IRC Smagorinsky model . . . . .	78
9.2.3	An example: D3Q19 implementation . . . . .	79
9.3	Approximate Deconvolution Methods for LBM-LES . . . . .	80
9.3.1	High-order deconvolution method . . . . .	80
9.3.2	Simplified procedure . . . . .	81

---

<b>10 Rotating flow LES</b>	<b>83</b>
10.1 LES problem in rotating frame . . . . .	83
10.1.1 Governing equations in a rotating frame . . . . .	84
10.1.2 Subgrid terms in a rotating frame . . . . .	85
10.2 Turbulence dynamics: pure rotation . . . . .	85
10.3 Turbulence dynamics: coupled shear/rotation effects . . . . .	87
10.3.1 Spanwise rotating plane channel flow . . . . .	88
10.3.2 Streamwise rotating plane channel flow . . . . .	88
10.3.3 Rotating complex duct flows . . . . .	94
10.3.4 Rotor-stator cavity . . . . .	100
10.3.5 Rotating blades . . . . .	102
<b>11 Navier–Stokes-LES equations</b>	<b>109</b>
11.1 Incompressible flows . . . . .	109
11.2 Compressible flows . . . . .	110
