

Gas Turbine Combustion

Three case studies for the analysis of low emission combustion systems

Peter Flohr*

ALSTOM (Schweiz) AG
Brown Boveri Strasse 7
5401 Baden, Schweiz

May 27, 2009

Contents

1	Introduction	2
2	Prediction of flow & mixing in a gas turbine burner	2
2.1	Introduction	2
2.2	Analytical model of the burner flow & mixing	3
2.3	CFD analysis of the burner flow & mixing	5
2.4	Summary	7
3	Using thermoacoustic analysis for robust burner design	8
3.1	Introduction	8
3.2	LEV single burner design	9
3.3	LEV thermoacoustic model	9
3.4	Results	12
3.5	Summary	13
4	Reheat combustion: the proven pathway to low emissions	13
4.1	Introduction	13
4.2	Basic reheat features for low emissions	14
4.3	Generic operational and fuel flexibility	16
4.4	Engine experience	17
4.5	Summary	18
5	Figures	19
