

CONTENTS

1. Static and Dynamic Properties of
 Radial Sliding Bearings
- 1.1 Basis and Calculating Procedure
- 1.1.1 Friction and Formation of Pressure
- 1.1.2 Derivation of the Basic Equations
- 1.1.3 Reynolds Equation for Dynamic Loading
- 1.1.4 Integration of Reynolds Equation
- 1.1.5 Boundary Conditions
- 1.1.6 Integral Values
- 1.2 Multi-lobe Bearing
- 1.2.1 Bearing Geometry
- 1.2.2 Multi-lobe Bearing Calculation
- 1.3 Thermal Problems
- 1.3.1 Heat Generation and Friction
- 1.3.2 Natural Convection and Circulatory Lubrication
- 1.3.3 Adiabatic Conditions
- 1.3.4 Calculation Results for Variable Viscosity
- 1.4 Linearization of Oil Film Forces and
 Spring and Damping Coefficients
- 1.4.1 Spring Coefficients of the Oil Film
- 1.4.2 Damping Coefficients of the Oil Film
- 1.5 Turbulence in the Lubrication Gap
- 1.5.1 Laminar - Turbulent Transition
- 1.5.2 Bearing Friction in the Turbulent Region
- 1.6 Design Aspects
- 1.6.1 Bearing Body
- 1.6.2 Oil Flow
- 1.6.3 Bearing Clearance
- 1.6.4 Circumferential Speed and Load Capacity
- 1.6.5 Bearing Geometry
- 1.7 Results for Multi-lobe Bearings
- 1.7.1 Two-lobe Bearings
- 1.7.2 Multi-lobe Bearings

2. Vibrational Behaviour of Rotors on
Journal Bearings

- 2.1 Introductory Comments
- 2.2 The Flexible Rotor in Rigid Bearings
- 2.3 The Flexible Rotor in Sliding Bearings
- 2.4 The Rigid Rotor in Sliding Bearings
- 2.5 Stability and Damping of Free Rotor Vibrations
 - 2.5.1 Stability of the Rigid Rotor
 - 2.5.2 Stability of the Flexible Rotor
- 2.6 Unbalance Vibrations of the Flexible Rotor
- 2.7. The Influence of Flow Forces
 - 2.7.1 Introductory Comments
 - 2.7.2 Gas Bearing Effect
 - 2.7.3 Lomakin Effect
 - 2.7.4 Labyrinth Seals
 - 2.7.5 Exciting Forces Depending on Power
- 2.8 Results of Some Calculations and Tests
 - 2.8.1 Spring and Damping Coefficients
 - 2.8.2 Power Loss and Temperatures
