INTRODUCTION

MAJOR REFERENCES OF A GENERAL NATURE

EQUATIONS AND CLOSURE METHODS

Differential Equations Governing Compressible Turbulent

Boundary Layers

Closure Methods

FLOW PHENOMENA PECULIAR TO CALCULATION OF COMPRESSIBLE

TURBULENT BOUNDARY LAYERS

Turbulence Induced Normal Pressure Gradient

Influence of Compressibility and "Density Fluctuation" Terms

Comparison of  $\bar{T}_{\text{Static}}$  and  $u'^2/2C_p$

"Precursor Transition" Effect

Existence of Large  $p'$  Levels in Compressible Turbulent

Boundary Layers

Turbulence in Outer Portion of  $M \gg 1$  Boundary Layers

Energy Lost Via Acoustic Waves

SIMPLE METHODS

Transformations

Correlation Methods

Integral Methods

## NUMERICAL SOLUTION PROCEDURES

Solution Techniques

Systems of Independent Variables

## MEAN FIELD CLOSURE

Wall Damping Constant

Prandtl Wall Constant,  $K$

Outer or Wake Constant

Turbulent Prandtl Number,  $Pr_t$

Intermittancy Normal to the Wall,  $\gamma(y)$

## APPLICATIONS OF MEAN FIELD CLOSURE METHODS

The Case of the Nozzle Wall Turbulent Boundary Layer

Influence of Distributed Normal Surface Injection

(Wall Blowing) Upon Skin Friction

Transitional Flow Calculations

Additional "Non-Typical" Applications of Mean Field

Closure Methods

## NONEQUILIBRIUM AND MEAN TURBULENT FIELD CLOSURE

Physical Problem

Single Equation Models

Two Equation (and more) Models for Compressible Flows

## CALCULATION OF THREE-DIMENSIONAL COMPRESSIBLE TURBULENT

BOUNDARY LAYERS

Status

Boundary Layer Equations

Coordinate Systems and Transformations

Turbulence Modeling

Numerical Solution Procedures

Status of Three-Dimensional Boundary Layer Computational

Techniques

CONCLUDING REMARKS

APPENDIX - SUMMARY OF NONSIMILAR CALCULATION PROCEDURES FOR TWO-

AND THREE-DIMENSIONAL COMPRESSIBLE TURBULENT BOUNDARY LAYERS

Part I - 2-Dimensional Codes

Part II - 3-Dimensional Codes
