

CONTENTS

1.	Introduction	1
	1.1 General Remarks	1
	1.2 The Transition Process	2
2.	The Basic Theory	4
3.	Hypotheses About Spot Formation	6
	3.1 Constant-Pressure Flat Plate Flow	6
	3.2 A Generalised Intermittency Distribution	9
4.	Anomalous Spot Propagation	10
5.	Subtransitions	11
	5.1 Axisymmetric Flow	11
	5.2 Pressure Gradients	13
6.	Onset Prediction	14
	6.1 Empirical Correlations	14
	6.2 The e^n Method	18
7.	Spot Formation Rates	19
	7.1 Constant-Pressure Boundary Layers	19
	7.2 Effect of Pressure Gradients	22
8.	Models For the Transition Zone: A Review	23
	8.1 Linear-Combination Models	24
	8.2 Algebraic Models	28
	8.3 Differential Models	32
9.	A Linear Combination Model	35
	9.1 The Approach	35
	9.2 Onset Of Transition	36
	9.3 Intermittency Distribution	36
	9.4 Extent Of Transition	37
	9.5 Estimation Of Laminar And Turbulent Parameters	37
	9.6 Results And Discussion	38
	9.7 Zero-Pressure Gradient	38
	9.8 Pressure Gradient	40
10.	Assessment Of Current Models	41
	<i>Notes</i>	43
	<i>Tables</i>	44
