

Direct simulation of turbulent combustion

Thierry Poinsot
Laboratoire EM2C, CNRS
Ecole Centrale Paris

January 28, 1992

Contents

1	Introduction	2
2	Numerical issues	3
3	Flamelet models for turbulent premixed combustion	6
3.1	The flamelet assumption	6
3.2	Classical theories for flamelet regimes	7
3.3	Flamelet models	8
4	DNS of flame-vortex interactions: the spectral diagram and the limits of the flamelet regime	11
4.1	Introduction	11
4.2	Direct simulation of vortex/flame front interactions	11
4.3	Construction of turbulent combustion diagrams using DNS data	17
5	DNS of flame-turbulence interactions	19
5.1	Introduction	19
5.2	Diagnostics for DNS of flame-turbulence interactions	22
5.3	DNS of non-unity Lewis number effects in turbulent premixed flames	23
5.3.1	Review of Lewis number influence in premixed flames . .	23
5.3.2	Simulation results: local flame structure	24
5.3.3	Simulation results: global quantities	25
5.3.4	Simulation results: flame curvature and strain rate	27
6	Conclusion	29
