Part I BASIC ASPECTS OF THE BOILING PROCESS

1.0 INTRODUCTION	1
The Boiling Curve	2
The Quenching Curve	5
Pool Boiling and Flow Boiling	5
Application Considerations	7
The Boiling Heat Transfer Literature	7
1.1 THERMODYNAMIC PHASE-EQUILIBRIUM	10
Pure Substance	10
Presence of Inert Gas	13
Departure from Phase-equilibrium	14
1.2 NUCLEATION	15
Homogeneous Nucleation	15
Heterogeneous Nucleation. Isothermal Conditions	16
Nucleation in a Temperature Gradient	18
Nucleation in Liquid Metals	22
Nucleation in Unsteady Temperature Field	24
Active Site Density	27
1.3 BUBBLE DYNAMICS	30
1.3.1 Spherical Bubble in Uniform Fields	31
Formulation	31
The Physics of the Coupled Problem	35
Inertia Controlled Bubble Dynamics	36
Heat Transfer Controlled Bubble Growth	36
Combined Inertial and Heat Transport Controlled Growth	38
1.3.2 Non-spherical Bubble Near Surface Bubble in Temperature Gradient. Thermal Boundary Layer Model	43
Microlayer Evaporation Model	47
1.3.3 Effect of Translatory Motion	54
1.3.4 Bubble Growth in Binary Mixtures	54
1.4 PHENOMENA PERTAINING TO BUBBLE DEPARTURE FROM HEATER SURFACE	58
1.4.1 Bubble Size at Departure	58
1.4.2 Departure Frequency	61
1.4.3 Latent Heat Transport by Departing Bubbles	62
1.4.4 Forces Acting on Bubbles	64
1.4.5 Effect of Surface Orientation	65
1.4.6 Pressure Effect	66
1.4.7 Effect of Flow Velocity	66

1.5 PHENOMENA PERTAINING TO MAXIMUM AND MINIMUM HEAT FLUXES	69
1.6 PHENOMENA PERTAINING TO FILM BOILING	72
Part II POOL BOILING HEAT TRANSFER	77
2.0 INTRODUCTION	77
2.1 NUCLEATE BOILING	78
2.1.1 Background for Nucleate Boiling Models	78
2.1.2 Models and Correlations for Nucleate Boiling	82
2.1.3 Parameter Effects in Nucleate Boiling	86
2.2 MAXIMUM HEAT FLUX (CHF)	91
2.3 MINIMUM HEAT FLUX IN FILM BOILING	97
2.4 STABLE FILM BOILING	101
2.4.1 Horizontal Cylinder	101
2.4.2 Vertical Surface	103
2.4.3 Horizontal Surface	104
2.4.4 Sphere	104
NOMENCLATURE	105
