

TABLE OF CONTENTS

	<u>Page</u>
1. Introduction	1
2. The Mathematical Model	1
3. The "Hull Form" of the ACV	2
4. The General Problem	4
5. Formulation of the Linearized Problem	6
6. Development of Boundary Conditions	16
7. The "Effective Hull" of the ACV	23
8. Distribution of Surface Pressure during Oscillations	30
9. Equations of Motion	36
10. The Forces and Moments	41
11. Derivation of the Acceleration Potential	51
12. The Green's Functions	56
13. Steady Motion in Calm Water	57
14. The Drifting ACV	69
15. Forced Oscillation in Calm Water	73
16. Free Oscillation in Waves	77
17. Compartmented Cushions	92
18. Ride Comfort in Waves	96
19. Discussion and Conclusions	99
20. References	102

LIST OF FIGURES

- Fig. 1. Uniform and Diffused Cushions
2. Wave Resistance of a Drifting Hovercraft
3. Variation of Wave Resistance with Angle of Leeway
4. Surge Displacement in Regular Waves (Uniform Cushion)
5. Surge Velocity in Regular Waves (Uniform Cushion)
6. Surge Acceleration in Regular Waves (Uniform and Diffused Cushions)
7. Possible Zone of Adverse Performance in ACV Operation
8. Resonance in a Regular Seaway
9. Pitch Resonance in Regular Head Seas (Uniform and Diffused Cushions)
10. Heave Response in Regular Head Seas (Unsymmetric Cushion)
11. Pitch Response in Regular Head Seas (Unsymmetric Cushion)
