

PART 3

 TABLE OF CONTENTS

	<u>page:</u>
3.1 INTRODUCTION	3 - 2
3.1.1 Historical Review	2
3.1.1.1 Experimental Work	2
3.1.1.2 Theoretical Work	2
3.1.1.3 Recent Findings, Current Problems	3
3.1.2 Basic Concepts	4
3.1.3 Steady Gas Flow in Laval Nozzles	7
3.1.3.1 Main Features	7
3.1.3.2 Theoretical Description of Idealized Flow	7
3.1.3.3 Frictional Effects	11
3.1.3.4 Two-Dimensional Effects	11
3.1.3.5 Shocks with Heat Release	13
3.2 EXPERIMENTAL EVIDENCE IN NOZZLES	15
3.2.1 Test Equipment Used	15
3.2.1.1 Nozzle Apparatus Design	15
3.2.1.2 Instrumentation for Pressure Measurement	16
3.2.1.3 Other Instrumentation	17
3.2.2 Phenomenology of Condensation in Nozzles	19
3.2.3 Synopsis of Experimental Data	24
3.2.3.1 Pressure Distributions in Various Nozzles	24
3.2.3.2 Size and Growth of Fog Droplets	28
3.2.3.3 Wilson Lines	29
3.2.3.4 Fog Droplet Sizes	33
3.3 THEORETICAL DESCRIPTION OF THE CONDENSATION PROCESS	36
3.3.1 Nucleation Theory	36
3.3.1.1 Basic Ideas	36
3.3.1.2 Critical Droplet Size	38
3.3.1.3 Equilibrium Population of Critical Droplets	38
3.3.1.4 A Rough Expression for the Nucleation Rate	39
3.3.1.5 Classical Nucleation Theory	40
3.3.1.6 Time Delay of Nucleation	43
3.3.1.7 Surface Tension of Droplets	44
3.3.1.8 Modified Nucleation Theories	44

	<u>page:</u>
3.3.2 Droplet Growth Theory	47
3.3.2.1 Growth Rate Equation	47
3.3.2.2 Kinetic Expression for Droplet Temperature	51
3.3.3 One-Dimensional Flow with Condensation	53
3.3.3.1 System of Equations	53
3.3.3.2 Numerical Solution	57
3.3.3.3 Typical Results	58
3.3.3.4 Comparison of Theory and Experiment	62
3.3.3.5 Condensation in the presence of Shock Waves	63
3.4 INFLUENCE OF FOREIGN NUCLEI	64
3.5 CONDENSATION IN CASCADES AND TURBINES	66
3.5.1 Experimental Evidence	
3.5.1.1 Cascade Flow	66
3.5.1.2 Turbine Flow	70
3.5.2 Theoretical Explanations	70
References to Part 3	73
